

## Brighton Casement

### Procedure for removing lock handle

1. Raise lock handle slightly and remove bezel. This can be done simply by hooking a fingernail behind it or prying off with putty knife.

2. Raise lock handle to middle position. At this position, the release tab is most accessible.

3. To remove handle, take a small screwdriver and press on the rear of the tab that is in the small square cut-out at center of handle. While pressing down on tab, pull handle straight out.

\*To re-install, simply push handle back on firmly until tab 'pops' back up into square cut-out.
